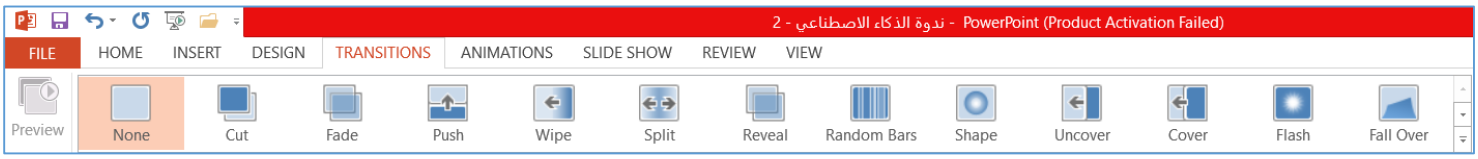
PowerPoint (Transitions & Animations)

MS.c Mortada Haider

1. What Are Transitions?

A transition is an effect applied when moving from one slide to the next in a PowerPoint presentation.

- **Types of Transitions:**
  - **Fade**: A smooth fade from one slide to the next.
  - **Push**: The new slide "pushes" the old slide off the screen.
  - **Wipe**: The new slide wipes across the old one.
  - **Cube**: A 3D cube effect that rotates between slides.
  - **Zoom**: The next slide zooms in or out.



- **How to Apply Transitions:**
  - Select the slide.
  - Go to the **Transitions** tab.
  - Choose the desired transition from the options available.

- **Timing tools to apply transition**

1- Sound

To pick a sound to play during the transition from previous slid to the next one

2- Duration

To specify the length of the transition

3- apply to all

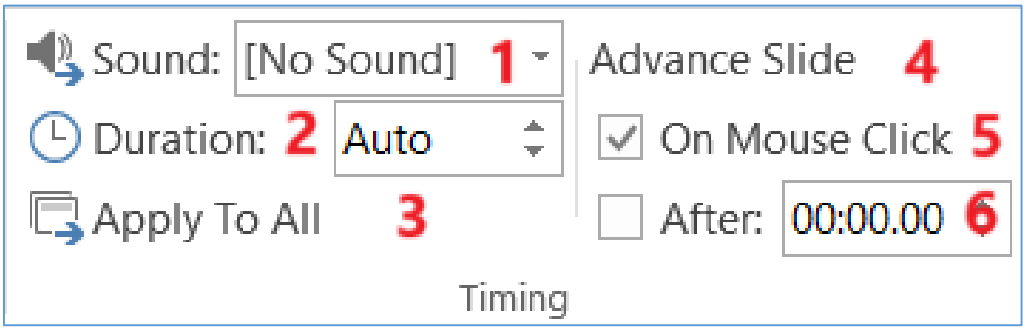
Apply the current slide's transition effects, and timing settings to the entire presentation

4- on mouse click

Wait until amuse click to move to the next slide

5- after

move to the next slide after a certain number of second s



2. What Are Animations?

Animations control the movement of objects (text, images, shapes) within a slide. Animations can make an object appear, disappear, or move in a certain way.

- **Types of Animations:**
  - **Entrance Animations**: Make an object appear on the slide.
    - Example: **Fade In**, **Fly In**, **Appear**.
  - **Emphasis Animations**: Apply effects to objects that are already on the slide.
    - Example: **Grow/Shrink**, **Spin**, **Pulse**.
  - **Exit Animations**: Make an object disappear from the slide.
    - Example: **Fade Out**, **Fly Out**, **Disappear**.

- **How to Apply Animations:**
  - Select the object you want to animate (text, image, shape, etc.).
  - Go to the **Animations** tab.
  - Choose an animation effect from the list.
  - You can adjust the **timing**, **duration**, and **delay** to control when and how the animation occurs.

THANK
YOU
