EXPERIMENT 2

ARITHMETIC OPERATION

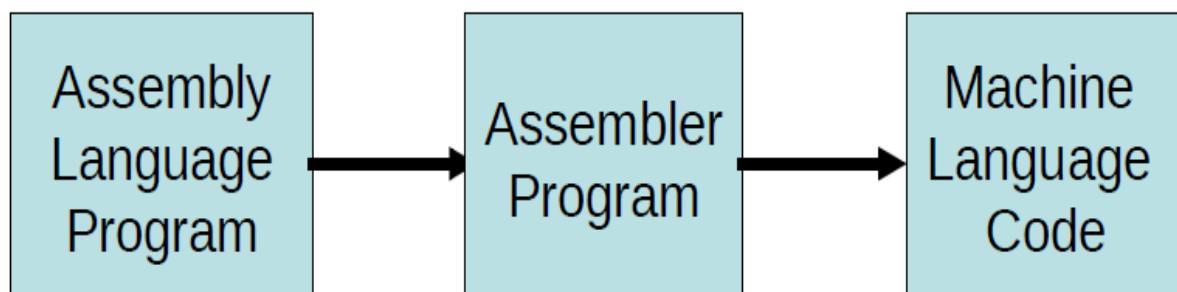

I. Introduction

Arithmetic Instructions are the instructions which perform basic arithmetic operations such as addition, subtraction and a few more. In 8085 microprocessor, the destination operand is generally the accumulator. In 8085 microprocessor, the destination operand is generally the accumulator.

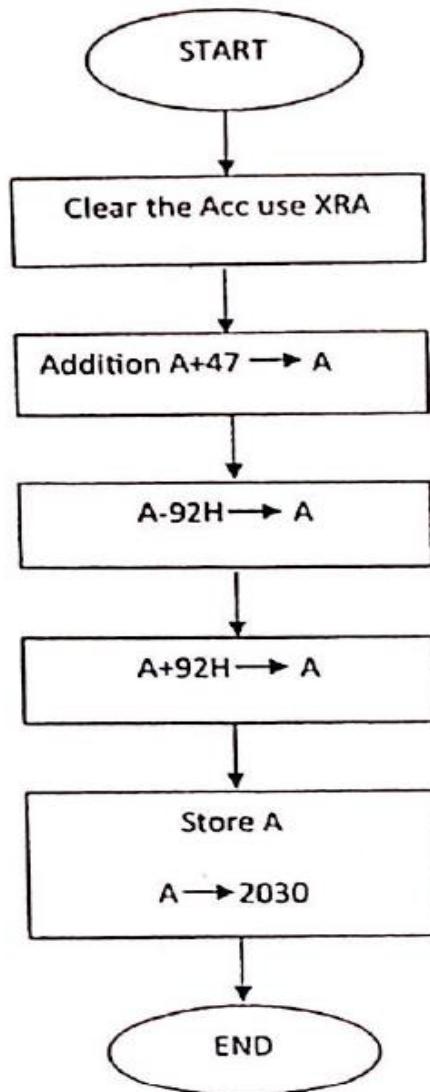

II. Experiment

Write a program to do following.

1. Clear the Acc(A).
2. Add 47H (use ADI instruction).
3. Subtract (92H).
4. ADD 64 H.
5. Store the Result in 2030H.

FLOW CHART

III. Source Code for program:

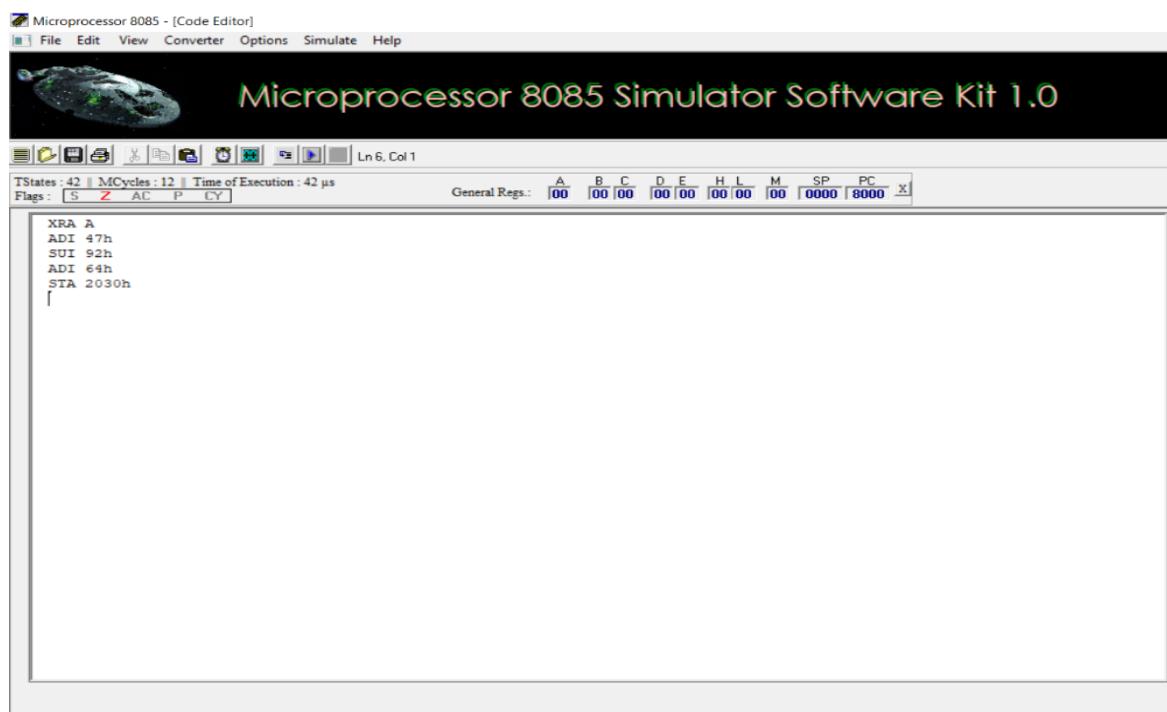

XRA A	; Clear the ACC ($A=00$)
ADI 47H	; Add the Acc. Data to 47H
SUI 92H	; sub Acc. Data to 92H
ADI 64H	; add Acc. Data to 64H
STA 2030H	; Save the output result in Acc.
RST5	; Finish the program

IV. Memory

INSTRUCTION CODE	REGISTER	DATA
XRA A	Accumulator	00
ADI 47H	Accumulator	47
SUI 92H	Accumulator	B5
ADI 64H	Accumulator	19
STA 2030H	2030	19
RST5	2030	19

V. Simulation program

I. Write the program code using microprocessor 8085 simulator

II. XRA A.

The screenshot shows the Microprocessor 8085 Simulator Software Kit 1.0 interface. The assembly code window displays:

```
XRA A
ADI 47h
SUI 92h
ADI 64h
STA 2030h
```

The status bar at the bottom shows:

TStates : 0 MCycles : 0 Time of Execution : 0 μs
Flags : S Z AC P CY
General Regs.: A B C D E H L M SP PC X

The memory dump window on the right shows the following data starting at address 8000:

Address	Data
8000	AF
8001	C6
8002	47
8003	D6
8004	92
8005	C6
8006	64
8007	32
8008	30
8009	20

The screenshot shows the Microprocessor 8085 Simulator Software Kit 1.0 interface. The assembly code window displays:

```
XRA A
ADI 47h
SUI 92h
ADI 64h
STA 2030h
```

The status bar at the bottom shows:

TStates : 11 MCycles : 3 Time of Execution : 11 μs
Flags : S Z AC P CY
General Regs.: A B C D E H L M SP PC X

The memory dump window on the right shows the following data starting at address 8000:

Address	Data
8000	AF
8001	C6
8002	47
8003	D6
8004	92
8005	C6
8006	64
8007	32
8008	30
8009	20

III. ADI 47H.

The screenshot shows the Microprocessor 8085 Simulator Software Kit 1.0 interface. The assembly code window displays the following instructions:

```
XRA A
ADI 47h
SUI 92h
ADI 64h
STA 2030h
```

The status bar at the bottom indicates: TStates : 18 MCycles : 5 Time of Execution : 18 μs. The general registers are shown in hex: A: B5, B: 00, C: 00, D: 00, E: 00, H: 00, L: 00, M: 00, SP: 0000, PC: 8005, X: . The flags register shows S=1, Z=0, AC=1, P=0, CY=1.

IV. SUI 92H

The screenshot shows the Microprocessor 8085 Simulator Software Kit 1.0 interface. The assembly code window displays the following instructions:

```
XRA A
ADI 47h
SUI 92h
ADI 64h
STA 2030h
```

The status bar at the bottom indicates: TStates : 25 MCycles : 7 Time of Execution : 25 μs. The general registers are shown in hex: A: 19, B: 00, C: 00, D: 00, E: 00, H: 00, L: 00, M: 00, SP: 0000, PC: 8007, X: . The flags register shows S=1, Z=0, AC=1, P=0, CY=1.

A "User Data Grid" window is open on the right side, titled "Comments :". It contains a table with one row:

Address	Data
2030	19

V. STA 2030H

VI. Discussion

1- Specify the register contents and the flag status as the following instruction are executed:

A	X	S	Z	CY
----------	----------	----------	----------	-----------

SUB A

MOV B, A

DCR A

INC B

DCR A

ADI 88H

SUI 01H

RST5

2- The following instruction subtraction two unsigned number, specify the content of register A and the status of the S and CY flags, explain the significance of the sign flag if it is set.

MVI A, 35H

ADI 22H

SUI 45H

3- Specify the register contents and the flag status (S, Z, CY) after the instruction ORA is executed:

MVI A, B5H

MVI B, 66H

ADD B

SUI 90H

ORA A

HLT
