Module Information
معلومات المادة الدراسية

Module Title	**Strength of Materials**	**Module Delivery**	
Module Type	**C**	☐ **Theory** ☒ **Lecture** ☒ **Lab** ☐ **Tutorial** ☐ **Practical** ☐ **Seminar**	
Module Code	**UOMU021042**		
ECTS Credits	**11**		
SWL (hr/sem)	**275**		

Module Level	2	**Semester of Delivery**	2
Administering Department	Mechanical Power Eng. Dep.	**College**	TCB
Module Leader	Dr.salwan aboid kfaje	**e-mail**	salwan.aboid.kfaje@ uomus.edu.iq
Module Leader's Acad. Title	Ass. Lecturer	**Module Leader's Qualification**	M.Sc.
Module Tutor	Name (if available)	**e-mail**	E-mail
Peer Reviewer Name		**e-mail**	
Scientific Committee Approval Date	10/06/2023	**Version Number**	1.0

Relation with other Modules
العلاقة مع المواد الدراسية الأخرى

Prerequisite module	MPAC107	**Semester**	L1- S2
Co-requisites module	None	**Semester**	

Module Aims, Learning Outcomes and Indicative Contents
أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Aims	

أهداف المادة الدراسية	This course is the foundation to many advanced techniques that allow engineers to design machine components, mechanisms, predict failure and understand the physical properties of materials. Mechanics of Materials gives the student basic tools for stress, strain and deformation analysis. Methods for determining the stresses, strains and deformations produced by applied loads are presented. Engineering design concepts are integrated throughout the course.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	1.To apply the formal theory of solid mechanics to calculate forces, deflections, moments, stresses, and strains in a wide variety of structural members subjected to tension, compression, torsion, bending, both individually and in combination, including : • axially loaded bars • components in pure shear • circular shafts in torsion • beams in bending • thin-walled pressure vessels 2. Determine the stresses and strains in members subjected to combined loading and apply the theories of failure for static loading 3. To determine principal stresses and angles, maximum shearing stresses and angles, and the stresses acting on any arbitrary plane within a structural element. 4. Analyze slender, long columns subjected to axial loads 5. Determine the deflections and rotations produced by the flexural loading. 1.
Indicative Contents المحتويات الإرشادية	***Indicative content includes the following.*** Give the students information about stress and strain, [12 hrs] Thermal stress, [12 hrs] Thin Walled stress torsion, [12 hrs] Thin Walled Torsion, [12 hrs] Shear force and bending moment diagram, [12 hrs] complex stress , [12 hrs] Mohr's circle. [12 hrs] Sum. 7*12=84 with lab. Part test for tensile, [4 hrs] impact, [4 hrs] hardness , [4 hrs] creep , [4 hrs]

	compression, [4 hrs] bending , [4 hrs] buckling , [4 hrs] torsion [4 hrs] sum.4*8=32 **TOTAL Structured SWL (h/sem)=84+32=116**
Learning and Teaching Strategies استراتيجيات التعلم والتعليم	
Strategies	The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students.

Student Workload (SWL) الحمل الدراسي للطالب			
Structured SWL (h/sem) الحمل الدراسي المنتظم للطالب خلال الفصل	116	**Structured SWL (h/w)** الحمل الدراسي المنتظم للطالب أسبوعيا	8
Unstructured SWL (h/sem) الحمل الدراسي غير المنتظم للطالب خلال الفصل	159	**Unstructured SWL (h/w)** الحمل الدراسي غير المنتظم للطالب أسبوعيا	9
Total SWL (h/sem) الحمل الدراسي الكلي للطالب خلال الفصل	275		

Module Evaluation تقييم المادة الدراسية					
		Time/Number	**Weight (Marks)**	**Week Due**	**Relevant Learning Outcome**
Formative assessment	**Quizzes**	2	10% (10)	5, 10	LO #1, 2, 10 and 11
	Assignments	2	10% (10)	2, 12	LO # 3, 4, 6 and 7
	Projects / Lab.	1	10% (10)	Continuous	
	Report	1	10% (10)	13	LO # 5, 8 and 10

Summative assessment	**Midterm Exam**	2 hr	10% (10)	7	LO # 1-7
	Final Exam	2hr	50% (50)	16	All
Total assessment			100% (100 Marks)		

Delivery Plan (Weekly Syllabus)

المنهاج الاسبوعي النظري

Week	Subject
1	Introduction to strength of materials
2	Simple stress and Strain
3	Compound Bars
4	Thermal stresses
5	Shearing force and bending moment diagrams
6	Bending of beam
7	Slope and deflection of beams
8	Shear stresses in beam
9	Torsion of shaft
10	Thin cylinders and shells
11	Complex stresses
12	Mohr's stress circle
13	Buckling of column
14	Strain Energy
15	Theories of Elastic failure
Week 16	**Preparatory week before the final Exam**

Delivery Plan (Weekly Lab. Syllabus)

المنهاج الاسبوعي للمختبر

Week No.	Material vocabulary
1-2	Tensile
3-4	Torsion
5-6	Impact
7-8	Hardness
9-10	Effect of heat treatment on steel hardness
11-12	Bending
13-14	Compression
15	Buckling

Learning and Teaching Resources

مصادر التعلم والتدريس		
	Text	**Available in the Library?**
Recommended Texts	1. Mechanics of materials By Hearn 2. Mechanics of materials By Dean Updike 3. Mechanics of materials By R.C. Hibbeler 4. Mechanics of materials By F.P. Beer 5. Mechanics of materials By Goodno and Gere	no

Grading Scheme مخطط الدرجات				
Group	**Grade**	التقدير	**Marks (%)**	**Definition**
Success Group (50 - 100)	**A -** Excellent	امتياز	90 - 100	Outstanding Performance
	B - Very Good	جيد جدا	80 - 89	Above average with some errors
	C - Good	جيد	70 - 79	Sound work with notable errors
	D - Satisfactory	متوسط	60 - 69	Fair but with major shortcomings
	E - Sufficient	مقبول	50 - 59	Work meets minimum criteria
Fail Group (0 – 49)	**FX –** Fail	راسب (قيد المعالجة)	(45-49)	More work required but credit awarded
	F – Fail	راسب	(0-44)	Considerable amount of work required

Note: Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.
