

Course Syllabus/Specification

Course Specification

‘

This Course Specification provides a concise summary of the main features of the course and the learning outcomes that a typical student might reasonably be expected to achieve and demonstrate if he/she takes full advantage of the learning opportunities that are provided. It should be cross-referenced with the program specification.

1. Teaching Institution	University of Al-Mustaqbal college of Science
2. Department / Center	Intelligent Medical Systems Department
3. Course Title /Code	Human Computer Interaction in Health Care MU03024202
4. Modes of Attendance Offered	Presence
5. Semester/Year	2025-2026
6. Number of Hours Tuition (Total)	60
7. Date of Production of this Specification	15/9/2024
8. Course Description	To understand the interaction between human and computer. Hence, it is a science depends on understanding both sides (i.e., human and computer).
9. Aims of the Course	<p>This subject aims to define the basics of interaction between human and computer by studying the related topics.</p>

A. Knowledge and Understanding

- 1- define the basics of interaction between human and computer
- 2- Understand the human side and how they interact with interfaces
- 3- define the cognition
- 4- Explain how to design an interactive interface
- 5- Ask students to design an interactive system

Teaching and Learning Methods (Select from No. 17)

- a. daily quizzes
- b. class activities
- c. suggestion of some websites to be viewed by students

Assessment Methods (Select from No. 18)

- a. class interfering
- b. activity evaluation
- c. monthly tests
- d. projects and seminars

B. Subject-Specific Skills.

- B1 summer practice
- B2 graduation projects
- B3 scientific research
- B4

Teaching and Learning Methods (Select from No. 17)

- a. administrating the class theoretically and practically to avoid student boring and miss understanding
- b. group homework and activities
- c. give a specific degree for these activities

C. Critical Thinking Skills

- C1. Improving student's skills through some work to be submitted within a specific time
- C2 improving the conversation and arguing skills
- C3 analyzing the problems through scientific methodology
- C4

Teaching and Learning Methods (Select from No. 17)

- a. quizzes without previous announcement
- b. restricting the submission time

Assessment Methods (Select from No. 18)

- a. involving and participation in class
- b. commitment with submission time
- c.

D. General and Transferable Skills. (Select from No. 16)

- D1 improving the student abilities of using technical assessments.
- D2 improving the student's ability of using internet
- D3 improving the student's ability of using multimedia with security
- D4

11. Course Structures					
Week	Hours	ILOs	Unit/Module or Topic Title	Teaching Method	Assessment Method
1	4	learning the basics of the subject	Introduction to Human computer interaction	Practical and theoretical	Daily quiz and HW
2	4	learning the basics of the subject	Interaction design	Practical and theoretical	Daily quiz and HW
3	4	learning the basics of the subject	Cognition	Practical and theoretical	Daily quiz and HW
4	4	learning the basics of the subject	Cognitive processes	Practical and theoretical	Daily quiz and HW
5	4	learning the basics of the subject	Social interaction	Practical and theoretical	Daily quiz and HW
6	4	learning the basics of the subject	Interfaces	Practical and theoretical	Daily quiz and HW
7	4	learning the basics of the subject	Prototyping	Practical and theoretical	Daily quiz and HW
8	4	learning the basics of the subject	Interaction design basics	Practical and theoretical	Daily quiz and HW
9	4	learning the basics of the subject	HCI in the software process	Practical and theoretical	Daily quiz and HW
10	4	learning the basics of the subject	Evaluation technique	Practical and theoretical	Daily quiz and HW
11	4	learning the basics of the subject	Midterm exam	Practical and theoretical	Daily quiz and HW
12	4	learning the basics of the subject	Usability	Practical and theoretical	Daily quiz and HW
13	4	learning the basics of the subject	Understanding users	Practical and theoretical	Daily quiz and HW
14	4	learning the basics of the subject	User interface design	Practical and theoretical	Daily quiz and HW
15	4	learning the basics of the subject	Project presentation.	Practical and theoretical	Daily quiz and HW

12. Infrastructure :

I. Textbooks:.	Ben Shneiderman , Catherine Plaisant," Designing the User Interface: Strategies for Effective Human-Computer Interaction," 4th Edition, 2004, Addison Wesley, ISBN 0321197860
II. References:	Alan D, Janet E. Gregory D. Russell B., " Human-Computer Interaction," 2003, Prentice Hall, ISBN 0130461091, Prentice Hall, ISBN 0130461091
III. Recommended reading: (Periodicals, Reports, ...)	
IV. E-References, Websites,	

13. Assessments:

		Type of Assessment Description										
	Weighting	Theory					Practical					
Course Work	Total	T.1	T.2		Assig.		Atten	T.1	T.2	Proj		Atten
	50	10	10		5		5	5	5	6		4
Final	Total	Theory					Practical					
	50	40					10					
Total	100											

14. Course Development Plan

Improving and adding new methods with rate not more than 10% every year.

15. ABET/CAC

	Student Outcome					Course Objectives						
a	An ability to apply knowledge of computing and mathematics appropriate to the program's student outcomes and to the discipline		I	II	III	IV	V					
b	An ability to analyze a problem, and identify and define the computing requirements appropriate to its solution						V					

c	An ability to design, implement, and evaluate a computer-based system, process, component, or program to meet desired needs					V					
d	An ability to function effectively on teams to accomplish a common goal					V					
e	An understanding of professional, ethical, legal, security and social issues and responsibilities					V					
f	An ability to communicate effectively with a range of audiences					V					
g	An ability to analyze the local and global impact of computing on individuals, organizations, and society					V					
h	Recognition of the need for and an ability to engage in continuing professional development					V					
i	An ability to use current techniques, skills, and tools necessary for computing practice					V					

Computer Science (CS)
For CS Add (j &k) to (a – i)

	<u>Computer Science (CS)</u>										
j	An ability to apply mathematical foundations, algorithmic principles, and computer science theory in the modeling and design of computer-based systems in a way that demonstrates comprehension of the tradeoffs involved in design choices					IV					
k	An ability to apply design and development principles in the construction of software systems of varying complexity					IV					

Information systems (IS)
For IS Add (j) to (a – i)

	<u>Information systems (IS)</u>										
j	An understanding of processes that support the delivery and management of information systems within a specific application environment					IV					

Information Technology (IT)
For IT Add (j,k,l,m,n) to (a –i)

	<u>Information Technology (IT)</u>										
j	An ability to use and apply current technical concepts and practices in the core information technologies					III					
k	An ability to identify and analyze user needs and take them into account in the selection, creation, evaluation and administration of computer-based systems					III					
l	An ability to effectively integrate IT-based solutions into the user environment					III					

m	An understanding of best practices and standards and their application			III							
n	An ability to assist in the creation of an effective project plan			III							
(IB) Information Business											
Add fields according to IB											
	Information Business <u>(IB)</u>			II							
o	An ability to apply total quality management for it system and to develop the software.			II							
p	An ability to analyze quantitative models for business in a long term plan (strategy) in dynamic business.			II							
q	An ability to apply E-process for organization.			II							

16. General and Transferable Skills

- a. Ability to adopt lifelong learning.
- b. Ability to communicate information with other specialization.
- c. Ability to solve problems.
- d. Ability to communicate effectively with colleagues in work environment.

17. Teaching and Learning Methods

- a. E-Learning
- b. Self-Learning
- c. Learning by Experimentation
- d. Cooperative Learning
- e. Brainstorming
- f. Indirect Learning

18. Assessment Methods

- a. Achievement Tests
- b. Standard Tests
- c. Individual Skills Assessment
- d. Selection of Intellectual Question in Achievement tests
- e. Collage Peer Assessment
- f. Collective Project
- g. Project consist of Random groups of Students
- h. Students Performance Assessment

i. Experience and Professionalism Assessment
